

Neighbourhood Watch QLD

Ensuring that street numbers are clearly visible can save vital minutes which could mean the difference between life and death. DS Numbers was founded in 2006 in response to the ever increasing realization for the need of clearly visible building identification.

Before entering into a sponsorship agreement with DS Numbers in 2010, we tested a sample solar powered house product and were impressed by its design, and more importantly; the fact that from one day of charge you can enjoy up to one-hundred and twenty hours of usage. The solar powered house number is available in an easy to install kit, complete with security screws and matching tool to prevent theft of the unit. They are also highly visible and are maintenance free.

Additionally, the fundraising opportunity presented by DS Numbers to Neighbourhood Watch Queensland was most rewarding in that all of our participating branches had the opportunity to gain financially whilst creating awareness of the importance of clearly visible house numbers, and together we worked towards achieving our vision, of building stronger and more connected communities.

Further to the effective and efficient product, the DS team present a 'can do' attitude. They are always at hand to address any questions, and Daniel Friel personally presents himself at branch meetings to demonstrate the unit and answer questions. A small yet professional company with great vision and a personal touch, I strongly recommend both the excellent product and the exceptional customer service of DS Numbers.

We, Neighbourhood Watch Queensland, are proud to have been associated DS Numbers.
